

KK In-Bin Glass Crusher

Our newly patented In Bin Glass Crusher is compact, simple and convenient to use as well as being environmentally friendly. This cost-effective machine smashes your problems relating to glass waste management – from noise pollution, volume reduction to cutting collection costs.

This product incorporates a 240 litre waste bin lid, which mounts onto any standard 240 litre bin. Glass bottles are dropped into the chute, where it is instantly crushed and falls straight into your bin ready for collection. Once the glass is crushed, the unit can be removed and placed onto the next bin.

This product is a revelation for hospitality venues such as restaurants, bars, pubs, hotels to name a few.

Features

- Lower Collection Costs
- Simple and Convenient to use
- Reduced Environmental Impact
- Reduced Site Waste Storage
- Increased Waste Storage Flexibility
- Less Waste Contamination
- Less Collection Noise
- Operates Directly into The Wheelie Bin, Maximising Ease Of Use And Operator Convenience

Options and Accessories

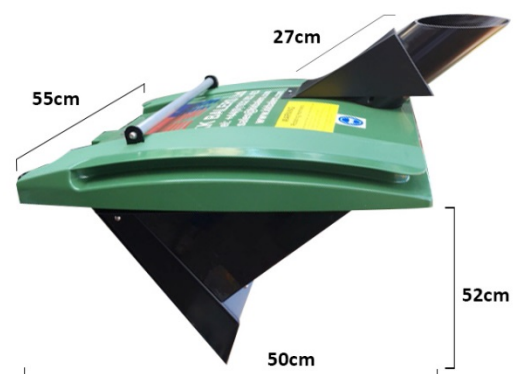

As an alternative option, this product can also be wall mounted, thereby allowing multiple bins to be offered to the crusher one at a time. Other options consist of crushing into a small plastic bin.

Benefits of a Glass Crusher

Empty glass bottles consist of mainly of air, therefore hospitality venues are predominantly paying to have air removed from their premises, rather than actual glass. Empty bottles take up space, which means that sites either have large number of bins collected weekly, or if space is limited, fewer bins are collected more frequently; either way it is expensive. Disposing of empty glass bottles is inconvenient, costly and inefficient. By smashing these bottles into cullet glass saves money and much more.

Wall Mounted Option
